

PRESS RELEASE August 1, 2001

APPLICATION FOR PALM™ VIIx HANDHELDS PROVIDES LOCATION BASED SERVICES AHEAD OF ALL MAJOR US CARRIERS

Provides Palm™ Handheld Users with the World's Largest Restaurant Resource

GlobalDining, the **world's largest, location-based mobile restaurant directory and reservation network** today announced the release of Version 1.5 of its Palm™ PQA application that puts the restaurants of the world in the palm of your hand. The application, known as a PQA (Palm™ Query Application) functions on any connected Palm™ handheld device.

Users of the mobile Internet-connected and location-enabled Palm™ VIIx handheld device can now access GlobalDining's international restaurant service while they're on the go, and receive only the most relevant restaurant information – based on location and specific criteria they select with a few simple taps. With the application, the user is able to search for restaurants “nearby” by proximity, cuisine type or other parameters, thus avoiding the hassles of scrolling through long lists of cumbersome, often irrelevant information.

The Application may be downloaded free of charge from the Company's web site at www.globaldining.com.

James Nardulli, GlobalDining CEO, “We are very pleased to be able to be the first mobile Internet Application to offer true Location Based Service. Palm has a terrific product that makes the mobile Internet experience much simpler and more user friendly. Coupled with our unique products and services, and the location aware nature of the application, this marks a major milestone toward the acceptance of the unwired experience by Consumers.”

The Application uses the capabilities of the Palm.net® service to fix the location of the user and then offers the option of finding restaurants “nearby,” or within a certain distance such as walking distance, one mile, and so on.

“The GlobalDining data resource is unique because rather than being just another directory, it is connected directly to restaurant owners who can edit and maintain their own listings from the Company's website,” said Nardulli. “There's an entire multi-billion dollar industry that has emerged to provide Location Based Services, and so far there has been a lot of talk. We decided to just do it.”

About GlobalDining www.globaldining.com and wap.globaldining.com

GlobalDining.com offers the world's largest and most comprehensive Internet directory of restaurants together with a Global Reservation Network. The Company has Patents pending in the US and Europe for its restaurant reservation technologies that enable wireless reservations on a global scale without the use of proprietary equipment or software at the restaurant level.

Strategic partners of the Company include **SignalSoft Corporation**, the worldwide leader in wireless location based services based in Boulder, Colorado; **Motorola**; **Nokia**; and **Maptuit**, a leading supplier of eGeo services worldwide with offices in Denver, Toronto, and Burlington, Massachusetts.
